

Industry Partnerships

We believe businesses can meet the challenges of today's climate crisis and innovate for a stronger, more resilient tomorrow.

At the Centre for Climate Change Management, we partner with businesses to access capital, commitment, and expertise to co-design climate change projects that reduce greenhouse gas emissions and generate co-benefits for the company and community. **Here's how:**

1

Meet the Team

- Discuss the partner's sustainability goals and challenges to understand how the Centre can support and proceed.

2

Define the Project

- Define scope of work, identify project deliverables and determine best methods to engage.
- Explore opportunities while reviewing project ideas and objectives.

3

Assess Viability and Funding

- Review the project's technical and financial viability.
- Align project with resources and stakeholders, and identify avenues for more supports if required.

4

Establish a Contract

- Sign a document from the Centre, outlining collaborative commitments, resource requirements, timelines, budget, and intellectual property agreements.

5

Create Solutions

- Assign resources to the project and bring in partner to set expectations and work assignments.
- Begin work and provide regular updates regarding progress or any changes to the work plan.

6

Implement the Project and Create Impact

- Deliver the completed product and/or service.
- Meet with partner to discuss outcomes, lessons-learned and future collaboration opportunities.

LET'S WORK TOGETHER.

ACCELERATING CLIMATE ACTION THROUGH PARTNERSHIP AND INNOVATION

The Centre for Climate Change Management at Mohawk College is a regional hub for climate action and collaboration. The Centre is accelerating transformational change toward a resilient, low-carbon economy.

The Centre supports industry and community partners to develop, research and apply climate change solutions and technologies.

Our Approach

Understanding stakeholders, opportunities and barriers

Co-creating solutions with stakeholders and end users

Prototyping and testing to de-risk innovation

Supporting implementation and impact

Partner With Us

- Sustainability and climate change strategy
- Applied research solutions
- Community and stakeholder engagement
- Co-op and experiential learning opportunities
- Work, meeting and event spaces

**TOGETHER. LET'S BUILD A STRONGER
MORE RESILIENT TOMORROW.**
